

How to Deal with Timezone Conversion:

- ☐ determine timezone from client
 - ☐ `<script type="text/javascript" src="//cdnjs.cloudflare.com/ajax/libs/jstimedetect/1.0.4/jstz.min.js"></script>`
 - ☐ OR `momentJS.guess()` (using Moment JS Timezone library)
- ☐ get the timezone name
- ☐ send the timezone name to the server
- ☐ do server stuff (ie, set the server time)
